A HANDBOOK OF DAIRY STATISTICS.

By T. R. PIRTLE.

SF235
.P5

EXPLANATORY NOTE.

Original sources and final figures are used in the tables where practicable. Preliminary figures, i. e., figures not finally verified, have been presented in a few instances to bring them up to date; but such figures are always so indicated in the tables. Many countries have found it necessary to revise the statistics gathered during the war, especially those relating to the number of cattle. During the war preliminary figures were not always indicated, but later checking up has shown them to be approximately correct, although the final figures vary from them to some extent.

(YB.) used in connection with a table indicates that the table may be continued to cover the latest figures available by reference to the Yearbook of the United States Department of Agriculture, as well as to the original source.

"Special imports" are imports brought into a country for consumption. "General imports" are for all purposes, and a part may be reexported. "Domestic exports" are of goods produced within a country.

Units of weight used to convert foreign or metric weights to pounds, United States, are:

	Pounds.
1 kilogram.....	2.2046
1 quintal.....	220.46
1 poud (Russian).....	36.1128
1 hundredweight (English).....	112.
1 pound (Spanish pound for Cuba).....	1.0161

The terms "dairy cows" and "cows" do not mean the same, the latter term including cows not used for dairy purposes. The number of "cows" was used when the number of "dairy cows" was not obtainable.

Where blank spaces are left in tables records were not made or were not available.

When figures are given for any year it may be assumed that it is the calendar year unless otherwise stated, although

LIBRARY OF CONGRESS

DOCUMENTS DIVISION

some of the authorities are indefinite on this point. Where the fiscal year is used, the date of ending is often changed in the middle of the series of years given.

The sources of the data quoted from United States Government publications are as follows: Department of Agriculture—Bureau of Animal Industry, Bureau of Statistics,¹ Bureau of Crop Estimates,² and Bureau of Markets;² Department of Commerce—Census Bureau and Commerce and Navigation Reports; Treasury Department—Bureau of Internal Revenue.

Reconstruction of territory recognized in all countries, 1919 and later.

¹ Bureau of Statistics is a former designation for the Bureau of Crop Estimates.

² The Bureau of Markets and the Bureau of Crop Estimates were consolidated July 1, 1921, and are now known as the "Bureau of Markets and Crop Estimates."

THE STATISTICS of an industry show its trend and form a basis for action toward its best development. Because data regarding dairy products and the trade in dairy products have never been brought together for convenient reference, attention has not been given to the trend of dairying in the degree that its importance warrants. To remedy this condition this volume has been prepared. In it will be found the available statistics on dairy production and trade which may be of value to the dairy industry.

GENERAL STATISTICS.

TABLE 1.—POPULATION of various countries.

A plan was adopted in 1917 by the Federal and State authorities to eradicate tuberculosis. This plan provides for "accredited herds."

An accredited herd is one which has been tuberculin-tested by the subcutaneous method, or any other test approved by the Bureau of Animal Industry, under the supervision of the Bureau of Animal Industry, or of a regularly employed veterinary inspector of a State in which cooperative tuberculosis-eradication work is conducted by the United States Department of Agriculture and the State. Further, it shall be a herd in which no animal affected with tuberculosis has been found upon two annual or three semiannual tuberculin tests, as described above, and by physical examination.

On June 30, 1921, there were in the United States 8,201 accredited herds and 49,814 once-tested free herds.

The receipts at New York were in the form of whole milk, cream, and condensed milk.

In Boston the receipts were by railroad. Means of receipt in the other cities not stated. The totals for Boston from 1906 to 1916, inclusive, are from Massachusetts Public Document No. 60 (1917), and from 1917 to 1919, from E. M. Hartwell, statistician, Boston.

¹ See Tables 34, 35 and 40 for whey butter.

² Cottage, pot, and baker's cheese are not included under cheese.

³ Sterilized canned milk, condensed buttermilk, and milk modified with foreign fats are not included in this table. Production of sterilized canned milk for 1919 was 4,420,713 pounds.

NOTE.—A few reports were made after this table was made; see Tables 40, 51, and 61 for final totals.

TABLE 39.—DAIRY PRODUCTS made during 1920 in FACTORIES in the United States, by States.

1913.....	145,227,862	2,477,659	1921.....	281,081,514	3,494,683

The table includes colored and uncolored oleomargarin. No imports have been noted in reports.

The Bureau of Internal Revenue is required to keep an accurate account of production and exportation of oleomargarin; however, the exportation figures are generally much lower than the figures reported by the Department of Commerce.

EXPLANATION OF FIGURE 1.¹

This chart was plotted from the difference of imports and exports, and includes butter, cheese, and condensed milk. The chart expresses these differences in terms of milk, assuming that—

1 pound of butter equals..... 21 pounds of milk.
 1 pound of cheese equals..... 10 pounds of milk.
 1 pound of condensed milk equals... 2½ pounds of milk.

¹ For detailed figures see Tables 70 and 71.

TABLE 132.—United Kingdom—Average ANNUAL CONSUMPTION of DAIRY PRODUCTS and MARGARIN from 1909 to 1913.

[The Feeding of Nations, by E. H. Starling.]

Product.	Home production and importation.	Per capita consumption.
	<i>Pounds.</i>	<i>Pounds.</i>
Milk and cream.....	9,920,700,000	216
Butter.....	707,676,600	¹ 15.38
Cheese.....	324,076,200	¹ 7.04
Condensed and evaporated milk.....	121,693,920	2.64
Margarin.....	261,465,560	5.46

¹ The per capita consumption of butter and of cheese as shown in this table is much less than that shown in Tables 4 and 5. This table is based on the average for 5 years, 1909 to 1913, while the figures in Tables 4 and 5 are based on a single year. There was a decrease in imports and in production during this period, hence a decrease in consumption.

Dairy products were estimated from 1908 census, and per capita consumption was obtained by using 46 million as average population for the period.
